

# TCI Products & Services... Cabling Solutions

Don't take the wiring of your voice and data networks for granted – get the wiring wrong and even the best equipment will not perform well, if at all. TCI specializes in designing standards-based solutions for structured, local- and wide-area networks. Whether you need to manage a new building, a renovation or a campus addition, our experts will install, support and maintain your entire infrastructure.

## Get connected, stay connected...

Integrating all the elements of today's networks can include a copper and fiber cable plant, phone system, switches and routers, and wireless networks. The ideal time to engage TCI is before building plans have been finalized. We'll work with your architect and facilities team to ensure that your network requirements are met – saving you money by avoiding retrofits later.

## TCI cabling solutions provide...

- ✓ Assessment, installation and support for advanced, complex networks
- ✓ Implementations based on IEEE and BiCSI standards and EIA/TIA certified
- ✓ A lifetime warranty on all certified installations
- ✓ A flexible, cost-effective infrastructure designed to accommodate future growth
